CHRONOLOGY

- Aurora**
Sr. Software Engineer 2024-26
- Indeed, Inc.**
Lead UX Developer 2022-24
Senior UX Developer 2020-22
Design Technologist 2018-20
- HBO**
UX Prototype Developer 2017
- Tectonic Design Studio**
Design Technologist 2015-16

SKILLS

- Frontend**
React, TypeScript, JavaScript, HTML/CSS, GraphQL & Apollo, Node.js, Python
- Graphics**
Canvas rendering, WebGL, Shaders, 3D animation
- Craft**
Design systems, UX design, Accessibility, Prototyping, Client-side state management
- Engineering**
API development, Full-stack apps, Unit & integration testing, CI/CD

EDUCATION

- University of Washington**
Bachelor's, Interaction Design
2011 - 2015

OTHER

- Ada Developers Academy**
Mentor & Tutor
Since 2022

EXECUTIVE SUMMARY

Design Engineer with 10+ years bridging design and engineering across high-fidelity prototypes, internal tools, and large-scale React and TypeScript applications serving 12+ million monthly users. Strong in frontend architecture, design systems, and complex interactive interfaces, from canvas and WebGL rendering to AI/ML labeling tools. Avid mentor, manager, and force multiplier who sets technical direction, works through fuzzy problems, and translates emerging capabilities into polished, user-centered experiences.

EXPERIENCE

Senior Software Engineer

Aurora | Aug 2024 - Jun 2026

- Built and shipped complex frontend features for a **4D visualization system**, using canvas rendering to support sensor-data labeling for machine learning.
- Owned the full project lifecycle of a **feedback management system**, applying user-centric design to align labeling tasks with policy.
- Implemented role-based access controls to manage user permissions and feature availability.

Lead UX Developer

Indeed, Inc. | 4 roles | 2018 - 2024

Joined the Job Seeker Profile team to elevate the user experience through high-fidelity prototypes and experimental UI. Promoted to Lead UX Developer while growing the Design Engineering cohort from 2 to 6 developers, serving as direct manager to 4 mid- and senior-level engineers. Trusted cross-functional subject matter expert and recipient of the **Indeed Innovation Award (2021)**.

- Led development of a React, TypeScript, and Apollo web application **from scratch**, delivering frontend experiences that grew to serve **12 million monthly users**.
- Led the transition to a modern React stack and established development patterns, best practices, and guidelines for a team of ~25 engineers.
- Built an internal tool for visually labeling resume PDFs, generating structured data for ML resume parsing. Improved parsing accuracy by **10%** and reduced reliance on third-party tools.
- Helped develop an internal prototype deployment framework that accelerated the entire Design Engineering organization (60+ people).
- Delivered high-fidelity, UX-centric A/B tests, experiments, and interactive prototypes; bridged project managers, engineers, and designers; mentored developers through tooling and process improvements.

UX Prototype Developer

HBO | 2017

Developed high-fidelity interactive prototypes for HBO's Digital Products team across native TV apps, gaming consoles, and Amazon Echo, conducting user studies and building internal design tools. Refined interaction models for cursor focus/navigation and user search that are still used in HBO apps today.

Design Technologist

Tectonic Design Studio | 2015 - 2016

Bridged design and implementation, turning concepts from creative directors, UX, motion, and visual designers into working prototypes for globally recognized brands including Microsoft, Amazon, and Bang & Olufsen. Built custom tooling to improve studio workflow and delivered design guidelines and redlines as interactive web pages.
